(54) Title: WIRE MESH PANEL AND METHOD

(57) Abstract: An assembly and method is provided for a decorative screen, wall, or other surface to provide a desired amount of light passing through, reflected by, and/or diffused by the decorative screen. In one preferred embodiment, at least one screen is formed of a plurality of wires that are woven together. The screen is preferably affixed within one or more transparent panels. In one embodiment, the screen may preferably have an arrangement with a number of wires having wire diameters in a selected weave or knitted pattern such that only between zero and eighty-five percent of the surface area of the screen is open area. The wire is preferably treated such that a desired level or amount metal luster is provided to control reflection/absorbtion properties of the screen. The screen may be utilized as building material such as walls, counters, shower enclosures, or to make other articles such as furniture.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/US04/21110

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)		
This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:		
1. Claim Nos.: 25 and 26 because they relate to subject matter not required to be searched by this Authority, namely: Please See Continuation Sheet		
2. Claim Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:		
3. Claim Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).		
Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)		
This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet		
As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.		
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.		
payment of any additional fee. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:		
No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-4,24 and 27		
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.		

INTERNATIONAL SEARCH REPORT	PCT/US04/21110

Box I Observations where certain claims were found unsearchable 1. because they relate to subject matter not required to be searched by this Authority, namely:

Claims 25 and 26 depend from claim 24. Claim 24 requires mounting a wire mesh to a panel. Claims 25 and 26 are inconsistent with claim 24 because, firstly, the claims require adhering the metal mesh within the panels. The specification does not describe a metal mesh BOTH adhered within and mounted to a panel. Secondly, claims 25 and 26 refer to "said step of affixing," however there is no step of affixing in claim 24.

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-4, 24, 27, drawn to a process of making an assembly comprising a wire mesh mounted to one or more substantially transparent plates/panels/panes.

Group II, claim(s) 5-23, 28-36, 40, 41 drawn to an assembly and process of making an assembly, the assembly comprising a wire mesh mounted within (embedded) one or more substantially transparent plates/panels/panels.

Group III, claim(s) 37-39, drawn to an assembly comprising a uniform metallic structure mounted within (embedded) one or more substantially transparent plates/panels/panels.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of mounting a wire mesh to a pane/panel/plate is not present throughout the claims.
